

ThinkStation P Series Workstations

Put to the test...

A system with a cooler operating temperature helps you in two ways: its components are less likely to fail, and it necessitates less air conditioning to keep the office at a comfortable temperature.

A more power-efficient system can lower your electric bill by using less electricity and running cooler.

Principled Technologies tested workstations from Lenovo, HP and Dell to bring the comparison reports between these systems.

The Lenovo® ThinkStation® P900

up to **61.5%** cooler

up to **33.7%** less energy

vs. the HP Z840

The Lenovo® ThinkStation® P700

up to **51.2%** cooler

up to **4.6%** less energy

vs. the Dell® Precision™ T7810

The Lenovo® ThinkStation® P500

up to **50%** cooler

up to **15.2%** less energy

vs. the Dell® Precision™ T5810

+ Lenovo Workstations Are Unique With Greenguard

People spend **90 %** of their time indoors*

Indoor air is **2 to 5 times more polluted** than outdoor air *

GreenGuard uses performance based, field validated standards to define products with low chemical and particle emissions to ensure the better indoor quality

Lenovo is the **ONLY** workstation vendor that has been certified with GreenGuard Certification**

* Source: The GREENGUARD Environmental Institute Media Kit

** All ThinkStation P Series and ThinkPad P Series have been certified according to the GREENGUARD Indoor Air Quality (IAQ) Certification Program for Low Emitting Products.
